

Total club management

(Instruction to run the application)

Admin credential for Heroku server & localhost.

email: sujanhossain313@gmail.com

password: abc123

1. Download the project folder to any local drive [for me it was in "D" drive]
2. Unzip the folder
3. You must have "Node.js" installed (for me it was version 12.16.1)
4. Open the project in VS code (optional, you choose any editor you like)
5. Go in to the "server" folder [usually do that via VS editor built-in terminal] and type "npm start" (without the double quote). Please make sure that the server is running on port 5000 i.e.: <http://localhost:5000>
6. Go in to the "client" folder [usually do that via VS editor built-in terminal] and type "npm start" (without the double quote) Please make sure that the server is running on port 3000 i.e.: <http://localhost:3000>
7. If there is any issue with package in step 5 & 6 then type "npm install" just to reinstall all the packages.
8. You must need to have internet access as I used MongoDB cloud server so that all our data remains same.
9. To use admin functionalities please the above credential to login.
10. That is, it, my application should be ready to use.
11. Address for my application in Heroku is: <https://total-club-management.herokuapp.com/>
